Linguistic Engineering
Bowne Global Solutions

Why is Bowne Interested in Standardized Data Exchange?

- Localization provider for over 300 clients => over 300 data models!
- →Optimize and simplify the process of interchanging terminological data
- ◆MT lexicons for 22 language directions
- →Optimize and simplify the process of interchanging lexical data

- ◆ Single data repository for all terminological, lexical and TM data
- Each entry may be used for HT/MT/NLP
- Incorporates project and general term/lex data
- Web-based access for managing and consulting data

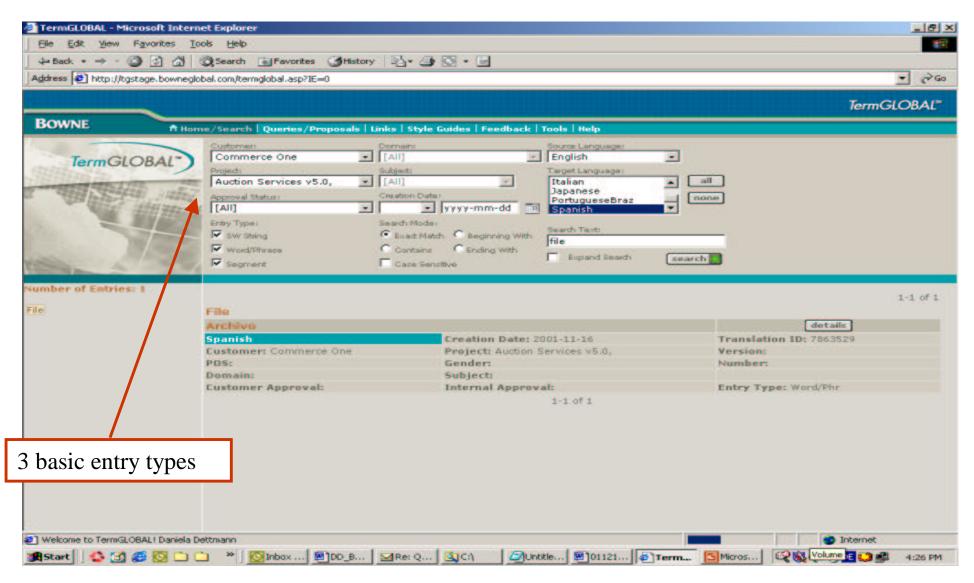

- ◆ Terminological Data Categories => "checked by" (ISO 12620)/ "QA Person" (BGS);
- MT-Related Data Categories
 => "InflectionClass" (OLIF)/ "Inflection Class" (BGS);
- **♦** Localization-related Data Categories

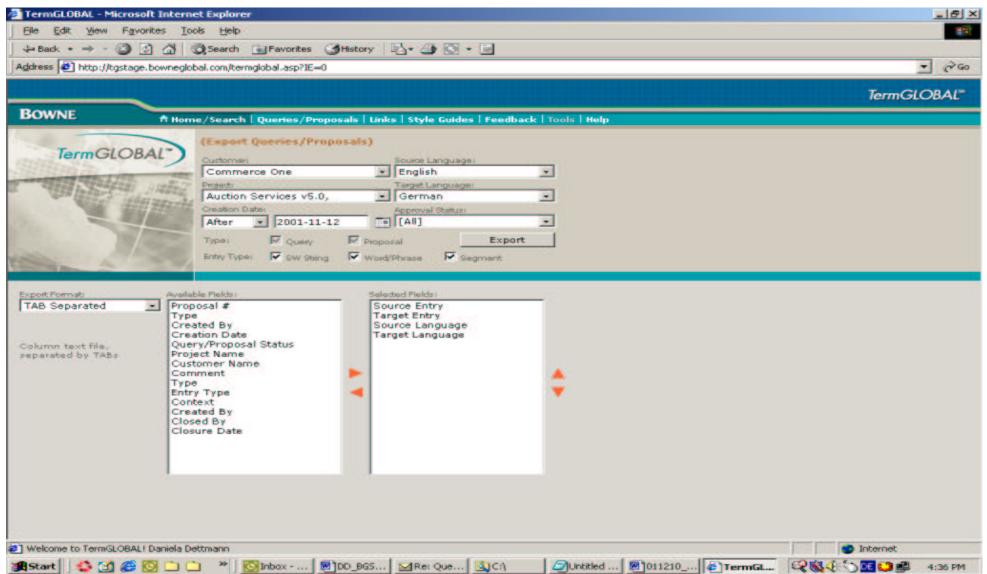

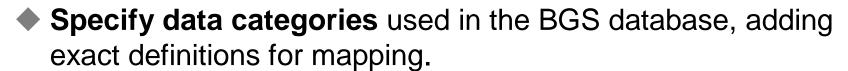

Mapping Bowne Data to ISO/OLIF in RDF

- ◆ Map data categories to existing standards or interchange formats (ISO 12620, OLIF); define supplemental data categories; propose new data categories for standardization (TC37/SC4).
- ◆ Define export format using tools and formats developed by the SALT group to create an XML environment for BGS' terminological entries designated for interchange with TBX.
- Create or identify converters to export BGS data to TBX, and to import BGS data into other databases (e.g., customer dbs) and data from other dbs into the BGS Linguistic Repository.

edición* electrónico*	desktop publishing	1	+Feminine		edición	3

Mapping Data Categories: Localization

- Category
- **♦**Platform
- **◆**Module

Mapping Data Categories: Comments

- ♦OLIF <note>
- ◆OLIF <usage>
- Bowne Comment Fields

Mapping Data Categories: More Examples

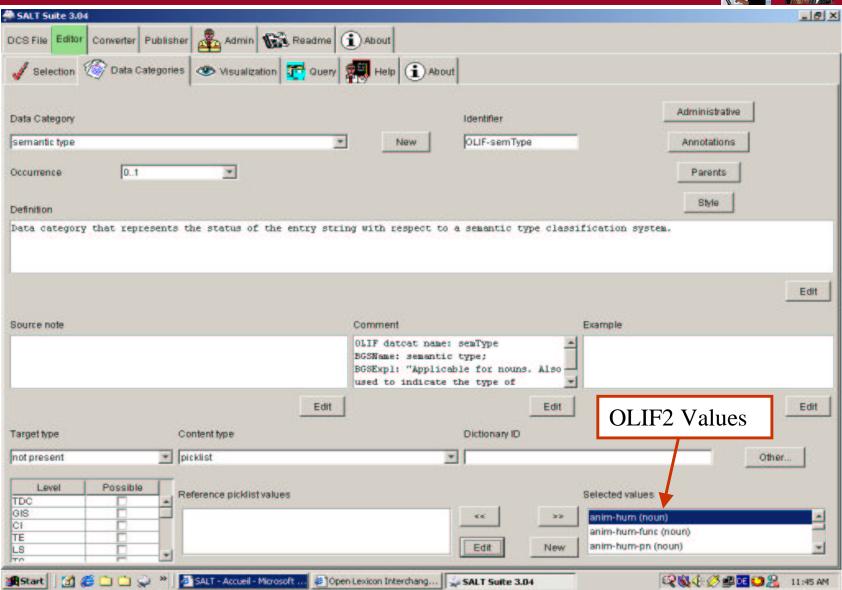

- Domain Hierarchy Levels
- "Component" Information
- Inflection Class, Domain and Semantic Type Information

Mapping Data Categories: Semantic Type

More Proposals and Comments

- Promote OLIF guidelines for formulating canonical forms
- Tool for mapping OLIF data categories
- Expandable OLIF category value lists for domain and semantic type
